### **Applications:**

BY-300 sugar coating machine is suitable for the small batch production and polishing of Chinese and Western tablets, pills, pellets, pellets, water pills, drip pills, etc. in the pharmaceutical, food, chemical and other industries. It is also suitable for spherical rolling in the pharmaceutical, food and chemical industries. Powder mixed.

### **Cautions:**

In order to make the chip evenly coat and crystallize on its surface layer as soon as possible, and to achieve the purpose of polishing, the chip in the pot must be sprayed with sugar paddles by hand, and the sugar-coated tablet is rolled in the pot by rotating the pot clockwise , sliding friction grinding, so that it is evenly distributed on the tablets at all the cores, while passing hot air into the pot to remove the water on the surface of the tablet, and finally obtain a qualified sugar-coated tablet.

This machine is to provide the best pot body for this sugar coating

process, to ensure the tablet to form the best logistics curve in the pot at a stable line speed, to meet the process requirements of uniform thickness of the sugar coating layer, bright color and no pitting.

### Technical Parameter:

- 1.Sugar-coated pot diameter: 300mm;
- 2.Production capacity: 1.5-3kg / time;
- 3.Inclination: 15° -45° adjustable;
- 4.Sugar-coated pan speed: 0-46 r / min;
- 5.Power: 1020w;
- 6.Equipment weight: 30kg;
- 7.Air volume of blower: 0.5m<sup>3</sup> / min;
- 8.Equipment volume: 550 × 400 × 930 mm;
